"Degradation and endoplasmic reticulum retention of unassembled alpha-
and beta-subunits of Na,K-ATPase correlate with interaction of BiP.";

J. Biol. Chem. 271:20895-20902(1996).

J. FUNCTION: Probably plays a role in facilitating the assembly of

multimeric protein complexes inside the ER.

-i- SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.

-i- SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CONFLICT

J. Cell Biol. 119:1069-1076 (1992).
IPPUNCTION: Probably plays a role in facilitating the assermultimeric protein complexes inside the ER.
SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=93077669; PubMed=1360013; Kuhl D., Kennedy T. The present invention describes erythropoietin analogue-human serum albumin (EPOa-hSA) fusion proteins having at least one amino acid residue of the EPOa moiety altered such that a site, which serves as a site for glycosylation in EPO does not serve same purpose in the EPOa. The present sequence represents a specifically claimed peptide linker for use in the construction of an EPOa-hSA fusion protein. The EPOa-hSA fusion protein can be used in treatment of a subject in need of EPO, e.g. for a patient suffering from anaemia associated with renal failure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           binding assays, affinity purification, drug or toxin targeting, imaging and genetic or immunological therapeutics for various cancers. The present sequence represents a linker amino acid sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2000-338508/29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a monoclonal antibody (MAb) (I) that binds to a human breast cancer antigen that is also bound by MAb 454C1 and 520C9 (produced hybridoma ATCC HB8484 and HB8696, respectively). All described is a hybridoma that produces (I). (I) is useful in specific

                                                                            cancer, arthritis, infections, neovascular glaucoma, inflammatory conditions, dermatitis, endometriosis, atherosclerosis, vascular restenosis and conditions associated with granulation tissues, suburns and pyogenic granuloma. The present sequence is an example spacer peptide for use in the invention.
                                                                                                                                               The present invention describes a method of enhancing the efficacy of agent by coadministering the agent and a context-dependent functional entity. The latter comprises a substructure with thrombogenic potentia and a selective recognition domain. This is useful in the treatment of
                                                                                                                                                                                                                                               Enhancing the efficacy of active and diagnostic agents and treating pathological conditions in a subject by administering the agent with a context-dependent functional entity, useful for treating e.g. malignant neoplasms -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              chronic disease, HIV infection, blood loss or cancer. The EPOa-hSA fusion protein can be included in a nutraceutical, such as an infant feeding formula. The EPOa-hSA constructs can be used as part of a gene therapy protocol to delivery nucleic acids encoding an EPOa-hSA fusion
